COST PER USE \$0.06

## FORMULATION OVERVIEW

It is important to use a Barrier Cream designed for spray tanning rather than utilizing an over the counter lotion. Why? The Sjolie Barrier Cream is specifically designed to block out DHA to minimize its development while leaving behind no residue which could potentially transfer and affect your clients fresh spray tan.

**HOW TO USE:** Apply Barrier Cream where you want to see minimal color or none at all. The Barrier Cream will prevent DHA from over developing on dry areas such as: hands, feet, palms, elbows and knees.

**PRO-TIPS:** Leave a thin white layer of Barrier Cream, do not rub in entirely as this will not block the DHA from developing on areas where the lotion is not visible.

## HIGHLIGHTED INGREDIENTS

### SAFFLOWER SEED OIL:

Odorless plant oil containing essential fatty acids to help hydrate and moisturize the skin.

### BUTYLENE GLYCOL:

An agent that attracts moisture to the skin to aid in retention.

### GLYCERINE:

Derived from vegetable oil; a humectant, emulsifier and skin softener.

### TOCOPHEROL ACETATE:

(Vitamin E) naturally derived, providing antioxidant properties to protect against free radicals.
