

LUXE VIOLET NO.9

VIOLET UNDERTONES | ALCOHOL BASED | 8-HOUR DEVELOPMENT

FORMULATION OVERVIEW

This solution is a perfect year-round color and ideal for medium complexions who want a deep brown tan. This solution can be used on all undertones but will most definitely compliment clients with warm complexions.

HOW TO USE: Clean and prep the body using our pH Balancing prep spray and Barrier Cream. For a full-body tan, use 2oz. of solution and only apply 1-coat. The client should wait 8-hours before rinsing and no longer than 23-hours. Do not use soaps or washes during the initial rinse. Soaps that can compromise the tan should be avoided for the duration of the tan.

PRO-TIPS: This is an alcohol-based solution, which means the average tan will last 5-7 days with proper care. Clients should moisturize daily and use gentle soaps approved for spray tanning.

COST PER USE \$2.25

SUITABLE SKIN TYPES

SKIN TYPE 3

Most common skin type

- Fair complexion
- Light eyes & Hair color
- Burns easily, tans with difficulty

SKIN TYPE 4

- Mediterranean Caucasian complexion
- Olive skin
- Medium to heavy pigmentation
- Rarely burns, tans easily

HIGHLIGHTED INGREDIENTS

GLYCERIN

A moisturizing compound used to prevent dehydration of the skin and aid in retaining moisturizer. Glycerin uses moisture from the air to penetrate the skin for natural hydration. Glycerin also acts as a skin soother, so its hydrating properties will not negatively affect acne or oily prone skin types.

CETEARYL ALCOHOL

This alcohol is non-toxic and safe for the skin. It is considered fatty alcohol derived from coconut oil; this is not a derivative of Petro. Used as an emulsifier, which binds oil & water together, this alcohol acts as a texture enhancer & promotes the solution's quick-dry benefits. It is non-drying & non-irritating to the skin like other alcohols.

GLYCERYL STEARATE

Used as a skin conditioning agent, emollient, and a surfactant.
