

**BOLD.
BEAUTIFUL.
SUNLESS.**

The perfect tan doesn't come without proper care before and after the application of the solution. There are 4 rules to follow when preparing for a spray tan. When these 4 rules are applied, you will experience a smoother, longer lasting tan.

A CALIFORNIA EXPERIENCE

RULE #2 DEVELOPMENT TIME

Always take the recommendation of the technician and don't shower too early. Showering prior to the recommended development time will increase the chances of washing the solution off before the color is fully absorbed into the skin.

RULE #3 MOISTURIZATION

Moisturization is also a crucial component when preparing for a successful spray tan. Moisturize 24 hours prior to getting a spray tan, especially after exfoliation. This will strengthen the skin and allow for the spray tan to last longer and fade evenly. Moisturization for the duration of the tan is also important.

RULE #4 USE THE RIGHT PRODUCTS

The Sjolie brand prides itself on the use of health promoting and natural products that keep healthy lifestyles in mind. The brand manufactures products for each of the key rules of spray tanning described in this pamphlet. While we encourage using healthy products of any kind, you can be sure that using Sjolie products are not only good for you, but your body and the environment, too.

RULE #1 EXFOLIATION

Exfoliation should be part of everyone's health regimen; however, exfoliation prior to a spray tan is especially important. Be sure to use an oil free scrub to avoid residue which can lead to an uneven spray tan result.

Benefits of exfoliating:

- Removes dead skin cells allowing new cells to absorb color
- Smooths top layer of skin for flawless spray tan application
- Stimulates blood flow helping to promote cell generation
